

Company Profile

Indidge Systems is a software provider building advanced software solutions for the enterprise. Our experience in healthcare, information technologies and high-tech manufacturing enables us to

provide software products and services for Data Automation, Information Systems, Simulation, Document Management, Inventory Tracking, Performance Tracking and Process Monitoring. Indidge strongly believes in customer satisfaction – building reliable solutions that bring value and competitive advantage to our customers. We offer the best value and most cost-effective solutions which reduce your software development costs.

Indidge Advantages

- ♦ A strong local presence with access to offshore operations, the result – greatly reduced cost of internal software development.
- ♦ Highly skilled, certified professionals that produce fast, reliable results that meet your deadlines.
- ♦ A 60% reduction in overall development cost and time.
- ♦ Complete customer satisfaction or your money back!

Software Development Services

Our certified professionals are experts in software design and development, both on and off-site. We analyze the assignment, define the requirements, and then design and develop software systems to meet your specific needs. We specialize in designing and developing enterprise applications that manage product and process data with simple to use graphical user interfaces. Indidge has experience building solutions for healthcare, manufacturing, aerospace and semiconductor industries.

Dedicated Software Development Teams

We specialize in building cost-effective off-shore development teams with a dedicated local project manager to handle your account. The project manager assumes responsibility for all communication between the dedicated Indidge team and your project team. We build your software development teams with no overhead costs to you. We are here locally to support you. We take pride in providing the best value solutions and customer satisfaction.

We have the expertise and experience in developing large enterprise applications using .NET and J2EE technologies. Our solutions save development costs and reduce Time-to-market. Our certified professionals are experts in software design, development and testing processes.
